

Lanphos PE35

Specification	Appearance at 25°C	:	Pale straw liquid free from foreign matter
	Acid Value mg.KOH/g	:	70.0 - 78.0
	Water Content %	:	1 Max

Typical Properties	Composition	:	Alcohol ether phosphate (free acid form)
	Odour	:	Characteristic
	Viscosity at 25°C (cP)	:	665
	Solubility in Water	:	Soluble
	Pour Point °C	:	<0
	Flash Point Closed Cup °C	:	>150

Wetting Scale

Typical properties are based on our own measurements and do not constitute part of the sales specification

Application Lanphos PE35 is a phosphate ester manufactured using phosphorous pentoxide to give a product that contains both mono and di-esters. The main advantage of a phosphate ester over a conventional anionic is its excellent stability in high concentration of acid, alkali and electrolyte.

Lanphos PE35 is supplied in free acid form but when neutralised the product can be used in areas such as :

- Textiles as a lubrication aid and / or emulsifier
- Metalworking cutting fluids - especially when neutralised with TEA
- Leather, Household, I+I, Agrochemicals and Emulsion Polymerisation

Packaging Lanphos PE35 can be supplied in bulk road tankers, IBC's, 200kg or 25kg nett drums.

Storage Stainless steel, polyethylene or glass lined equipment is necessary for the storage of Lanphos PE35 in order to prevent corrosion and subsequent contamination. This material can separate on standing and at low temperatures. May require agitation and warming prior to use.

All information, recommendations and suggestions appearing in the literature concerning the use of the product are based upon tests and data believed to be reliable. However it is the users responsibility to determine the suitability for their own use of the products described here. For non English datasheets translation has been carried out using translation software, Lankem accepts no liability due to errors that occur during translation.
